Let's talk Teeth...a lesson for kids

When you get your picture taken, everyone says, "Say cheese! Smile!" So you do - you open your mouth and show your teeth. When you see the picture, you see a happy person looking back at you. The healthier those teeth are, the happier you look. Why is that?

It's because your teeth are important in many ways. If you take care of them, they'll help take care of you. Strong, healthy teeth help you chew the right foods to help you grow. They help you speak clearly. And yes, they help you look your best.

Why Healthy Teeth Are Important

How does taking care of your teeth help with all those things? Taking care of your teeth helps prevent plaque, which is a clear film that sticks to your teeth. The film itself might not sound so bad, but it's very sticky, and it acts like a magnet for bacteria and sugar.

Like ants at a picnic, bacteria go crazy over the sugar on your teeth, breaking it down into acids that eat away tooth enamel, causing holes called cavities. Plaque also causes gingivitis, which is a gum disease that can make your gums red, swollen, and sore. Your gums are those soft pink tissues in your mouth that hold your teeth in place.

If you don't take care of your teeth, it won't be long before cavities and unhealthy gums make your mouth very, very sore. Eating meals will be difficult. And you won't feel like smiling so much.

Before Toothpaste Was Invented

We're lucky that we know so much now about taking care of our teeth. Long ago, as people got older, their teeth would rot away and be very painful. To get rid of a toothache, they had their teeth pulled out. It was only about 100

years ago that someone created a minty cream to clean teeth. Not long after that, the toothpaste tube was invented, so people could squeeze the paste right onto the toothbrush! Tooth brushing became popular during World War II. The U.S. Army gave brushes and toothpaste to all soldiers, and they learned to brush twice a day. Back then, toothpaste tubes were made of metal; today they're made of soft plastic and are much easier to squeeze!

When you're choosing a toothpaste, make sure it contains fluoride. Fluoride makes your teeth strong and protects them from cavities. When you brush, you don't need a lot of toothpaste; just squeeze out a bit the size of a pea. It's not a good idea to swallow the toothpaste, either, so be sure to rinse and spit after brushing.

How You Can Keep Your Teeth Healthy

Kids can take charge of their teeth by taking these steps:

- Brush at least twice a day; after breakfast and before bedtime.
- Brush all of your teeth (not just the front ones).
- Learn how to floss your teeth. Flossing gets rid of food that your toothbrush missed.
- Visit the dentist twice a year to check for cavities and gum diseases.

Brushing and flossing help keep your teeth healthy but you also need to be careful about what you eat and drink. Remember, the plaque on your teeth is just waiting for that sugar to arrive. Eat lots of fruits and vegetables and drink water instead of soda.

And don't forget to smile!
